Our Concerns

(Concerns)
Suitability for achievement

• Purposes

- Communication Between NGOs & HQ → NGOs & HQ sending Messages over Server
- Record Simulation → Users connected to Database over Network
- Preview Recording → has well defined text file
- Loading Dynamic Scenario files → HQ can load file?
- Can run within a local network → Applies to various network infrastructures.
- Support Custom Scenarios → features Scenario editing functionality
- Adapt to different Network environments → works across full range of networks
- encrypted Scenario files → encrypt them

Feasibility of Constructing (Concerns)

- Develop the Same Version for local and Network
- Sending texts between Computers
- Database increases Centralization & Expandability
- Reviewing the Simulation
- No Client installation for Developers
- Transport of the Software Package

Potential Risks for Stakeholders during Software's life

- Unexpected behavior from the result of a bug
- No Security Updates
- May not work with Computer updates
- Usability of Software if Poor could mean that Manual Solution is better
- Rival Software
- No advantage over Manual Simulation Process

Maintainability & Evolveability of The System

- Needs to support modularity
- Viability for basic maintenance

- of network code - of scenarios

- of source code
